THE AHA COMPANY

MASTER SLIDE TEMPLATE

The layout library for every Aha deck

For client pitches, workshops and foundation proposals. Pick a layout, copy the slide into your deck, replace the text in brackets.

English version 1920 × 1080 Version 1.0, September 2026

© 2026 The Aha Company. Confidential.

Layout library

01 **Cover** p. 6
Opening page: title, subtitle, date, confidentiality.

02 **Who we are** p. 7
Credentials opener: what we do, key figures, client logos.

03 **Case cards 2 × 2** p. 8
Four engagements side by side, each with its status.

04 **Split case study** p. 9
One reference in depth: milestones, what we built, why it matters.

05 **Flow diagram** p. 10
A process in steps, the parties involved and why it matters.

06 **Three numerals** p. 11
Three points of equal weight, optional key figures below.

07 **Numbered rows and steps** p. 12
Our method: four principles and the engagement steps.

08 **Team grid** p. 13
The people on the engagement and the engagement lead.

09 **Problem statement** p. 14
The client's problem in one sentence, three pain points.

10 **Today and target** p. 15
Current and future state compared on one page.

11 **In scope, out of scope** p. 16
Scope boundaries and the decisions still open.

12 **Benefits for two audiences** p. 17
What changes for the client and its partner, with metrics.

13 **Three-step roadmap** p. 18
A dated pilot: what the client gets, what we need.

14 **Networks grid** p. 19
The networks we ship on and what we do on each.

15 **Big number** p. 20
One figure, one sentence: a pause between dense pages.

16 **Key takeaways** p. 21
Three statements to close a section or a meeting.

17 **Glossary** p. 22
Twelve terms, each defined in one sentence.

18 **Status table** p. 23
Who owns each brick and where it stands.

19 **Decision table** p. 24
Decisions, options, who decides, our recommendation.

20 **Scenarios** p. 25 to 28
Three options side by side, then one page per option.

© 2026 The Aha Company. Confidential.

Layout library

21 **Risks and mitigations** p. 29
Six risks and what we do about each.

22 **Next 30 days** p. 30
Dated actions with owners until the next checkpoint.

23 **Gantt chart** ● To confirm
Plan to launch, dependencies and a today marker.

24 **Sequence diagram** ● To confirm
One transaction across parties, flows coded by asset.

25 **Architecture diagram** ● To confirm
Layers: client systems, orchestration, on-chain, third parties.

26 **Daily cycle** ● To confirm
Who does what, at what time, over one business day.

27 **Step-by-step process** p. 31
Six steps, and what stays off chain or goes on chain.

28 **Four reasons** p. 32
Four arguments, each with a short label.

29 **Contact and thank you** p. 33 to 34
Closing pages: light contact page, navy thank-you page.

30 **Appendix variants** p. 35 to 36
Split and networks pages in appendix style.

31 **Section divider** p. 37
Opens a new part of the deck.

32 **Agenda** p. 38
The parts of the meeting, with timings.

33 **Workshop objectives** p. 39
Three outcomes expected from a workshop.

34 **Client quote** p. 40
A testimonial with name, role and logo.

35 **Chart** p. 41
One bar chart and the sentence it supports.

36 **Engagement options** p. 42
Three ways to work together, in one template.

37 **Comparison table** p. 43
Us against alternatives, or option against option.

38 **Before and after** p. 44
Four metrics before and after the change.

39 **Full-bleed image** p. 45
A photo or screenshot with a caption.

40 **Blank with grid** p. 46
Start a new layout on the 12-column grid.

THE AHA COMPANY

[CLIENT NAME], [MEETING TYPE]

Blockchain engineering for regulated finance.

The Aha Company for [Client name]: who we are, what we have shipped, and [the opening we see].

[Month Year]

© 2026 The Aha Company. Confidential.

WHO WE ARE

The engineering team financial institutions bring in to ship regulated products on chain.

What we build

Stablecoins and tokenized cash, tokenized funds and securities, with compliance controls at the asset level.

Where we build

Stellar, Cardano, XRPL and EVM networks, often from inside the foundations that run them.

How we work

Senior engineers alongside your teams, from the architecture note to the audited mainnet release.

[XX]+	[X]	[X]	[Year]	[X]
engineers in finance and blockchain	regulated products on mainnet	networks in production	first mainnet release	security audits passed

TRUSTED BY

[Client logo] [Client logo] [Client logo] [Client logo] [Client logo] [Client logo]

TRACK RECORD

What we have shipped

Four engagements with regulated institutions, each live or in build.

EURO STABLECOIN

EUR CoinVertible on Stellar

[Logo]

The Stellar deployment of a bank's euro stablecoin: a classic asset governed by a custom admin contract, with compliance controls defined with the issuer.

● Delivered — Live on mainnet since [Month Year]

TECHNICAL LEAD

USD stablecoin for a US bank

[Logo]

Brought in by [Partner] under a co-selling agreement: token design, integration into the bank's systems and custody set-up.

● Delivered — Delivered, [Month Year]

FUND TOKENIZATION

Tokenized money market fund

[Logo]

A bank's money market fund, subscribed and redeemed on chain, with daily netting and a white-label investor app.

○ In progress — Mainnet launch planned for Q[X] [Year]

NETWORK GROWTH

DeFi protocol onboarding

[Logo]

A leading DeFi protocol the network wanted on board, ported to Soroban and brought to production with its team.

● Delivered — Live since [Month Year]

© 2026 The Aha Company. Confidential.

TRACK RECORD UNDER NDA

A fund, subscribed and redeemed on chain

What we are building for [Client name]'s € [X] million money market fund, and why it matters to anyone who distributes funds.

WITH

[Client logo] [Client logo]

The on-chain part is built, running and paid for.

MILESTONES

Q[X] [Year]	Q[X] [Year]	Q[X] [Year]	Q[X] [Year]
Design and architecture note	Build on testnet	Security audit	Mainnet launch

What we built

Fund share contracts, a daily netting contract and a white-label investor platform, connected to the bank's systems and to the transfer agent.

How it works

Investors subscribe at any hour in a regulated euro stablecoin. Orders are netted once a day and only the net amount reaches the transfer agent.

Why it matters

Same units, same fees, a new distribution channel. The fund reaches new clients through the app, with no new back office.

© 2026 The Aha Company. Confidential.

HOW IT WORKS

A subscription, from order to register

Five steps, four parties, one record everyone works from.

WHO IS INVOLVED

[Client bank]
Issues the tokenized share class and owns the client relationship.

The Aha Company
Builds and runs the contracts and the platform.

[Network]
Records units and payments, public and auditable.

[Transfer agent]
Keeps the official register of the fund.

WHY IT MATTERS

A new channel
Same units, same fees, clients reached through the app.

Orders at any hour
Execution still follows the fund's daily cycle.

No new back office
The transfer agent keeps its process; only the net amount moves.

© 2026 The Aha Company. Confidential.

TRACK RECORD

Our seat inside Stellar

The team the foundation embeds for institutional work, and the entry point institutions come through.

1

Inside the foundation

Several of our engineers sit inside the Stellar Development Foundation through its architect program.

2

The entry point for institutions

Banks and asset managers meet us first when they come to the network with a product.

3

Funded delivery

Milestone packages paid by the foundation, so the institution's first build carries no budget risk.

[X] engineers in the architect program

[X] institutions introduced

[X] funded milestones delivered

© 2026 The Aha Company. Confidential.

HOW WE WORK

Alongside your teams, not instead of them

Four principles, applied from the first workshop to the mainnet release.

01	**Architecture first**	A written architecture note before any code, reviewed with your security and compliance teams.
02	**Senior engineers only**	The people in the room are the people who write the contracts.
03	**Your code, your keys**	Repositories, keys and deployments stay under your control from day one.
04	**Knowledge transfer**	Your team pairs with ours, so it can run and extend the product without us.

ENGAGEMENT STEPS

Scoping	Architecture note	Build and testnet	Audit	Mainnet and handover
[X] weeks	[X] weeks	[X] weeks	[X] weeks	[X] weeks

Durations are indicative and depend on [scope, third parties and audit slots].

© 2026 The Aha Company. Confidential.

© 2026 The Aha Company. Confidential.

THE PROBLEM

Positions, orders and commissions live in four back offices. You reconcile copies.

A shared register replaces the copies with one record everyone works from.

THREE PAIN POINTS

01 **Orders**

Subscriptions, switches and withdrawals travel by file and are re-keyed at each step.

02 **Positions**

Each party keeps its own copy, so month-end starts with gaps to explain.

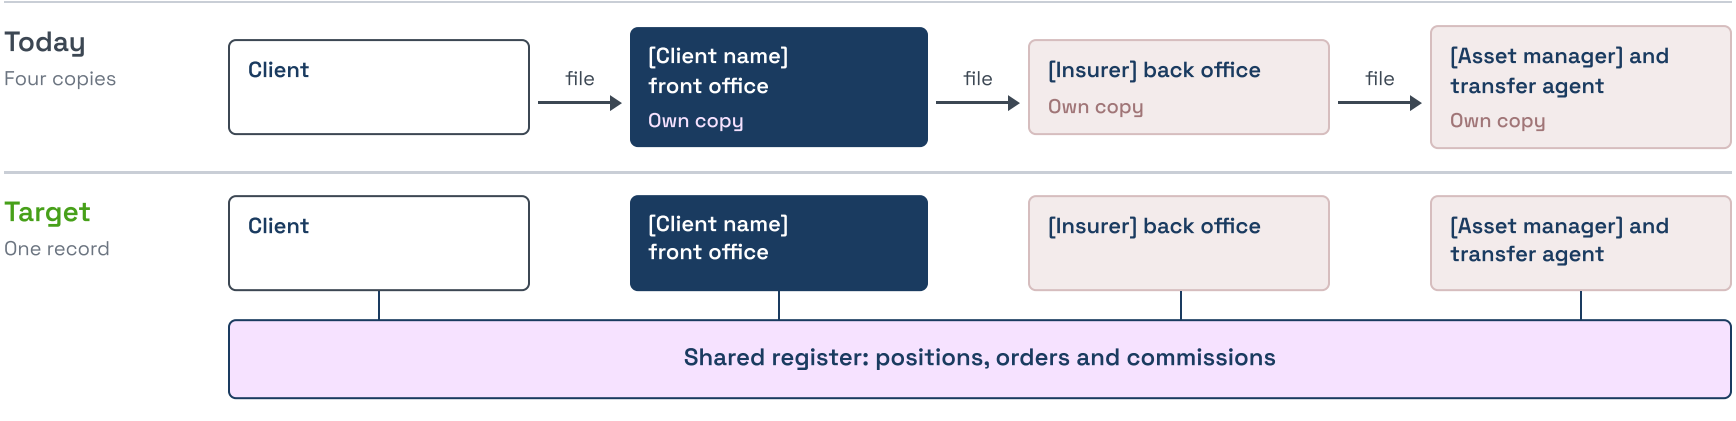

03 **Commissions**

Retrocessions are computed on both sides and disputed by email.

© 2026 The Aha Company. Confidential.

Today, and with a shared register

The insurer stays the source of truth. What changes is where the truth is written.

What stays

Contracts, KYC and the insurer's books of record.

What changes

Orders and positions are written once, in one place.

What goes away

Files, re-keying and month-end reconciliation.

© 2026 The Aha Company. Confidential.

THE OPENING

What goes on the register, and what stays off it

Enough to agree on positions and commissions. Nothing that identifies a client.

In scope: on the register

- Pseudonymized contract and fund identifiers
- Positions per contract and per fund
- Orders and their status
- Commission bases and amounts

Out of scope: stays off it

- Client names and personal data
- KYC files
- Bank details and payments
- Contract documents

DECISIONS TO TAKE

Who runs the register nodes?
Owner: [Name], by [Date]

Which insurer joins the pilot?
Owner: [Name], by [Date]

Which data needs the DPO's sign-off?
Owner: [Name], by [Date]

© 2026 The Aha Company. Confidential.

THE OPENING

What it changes

For you, and for the insurer you bring to the table.

For [Client name]

Faster month-end
From statements you check to a report you already agree with.

Fewer disputes
Disputes settled on the record, not by email.

Room to grow
A new insurer joins the register, not a new integration project.

For [Insurer]

One feed
Orders arrive once, in one format, already validated.

Clear commissions
Bases and amounts agreed before the invoice.

No new back office
The insurer's books stay the source of truth.

[X] days	[X] %	[X]	[X] h
for month-end close	fewer reconciliation breaks	files removed per month	to settle a dispute

© 2026 The Aha Company. Confidential.

THE OPENING

A pilot in three steps

Small, dated, and useful whatever comes next.

Now

Scope and metrics

One product line, one insurer, and the metrics we will judge the pilot on.

Q[X] [Year]

Side-by-side run

The register runs next to today's files, with a line-by-line comparison.

[Year]

Register in production

Files switched off on the pilot scope, more insurers invited.

WHAT YOU GET

- A scope note and agreed metrics
- A line-by-line comparison report
- A running register on the pilot scope

WHAT WE NEED FROM YOU

- An operations lead, [X] days a month
- One insurer willing to take part
- Access to test files by [Date]

© 2026 The Aha Company. Confidential.

TRACK RECORD

Beyond Stellar: the networks that matter to a bank

The same team and the same standards, on the networks institutions are building on.

Stellar | Cardano | XRPL | EVM networks | [Network]

Stellar

Soroban contracts in Rust, native assets with authorization, clawback and freeze. Our home network since [Year].

Cardano

A UTxO ledger with native multi-assets, Aiken and Plutus contracts, and CIP-0113 programmable tokens.

XRPL

Native issued assets with issuer-side controls (authorization, freeze, clawback) and a native exchange.

EVM networks

Permissioned tokens with compliance hooks, where the institution's counterparties already are.

One partner across your networks, one set of engineering standards.

© 2026 The Aha Company. Confidential.

€[X]M

Assets under management of [Fund name] at [Date], now open to a new distribution channel.

© 2026 The Aha Company. Confidential.

KEY TAKEAWAYS

What to take away

1 The on-chain part exists, runs and is paid for.

2 Launch depends on three decisions and two third parties, not on code.

3 We finish in [Month]; launch in Q[X] [Year] is reachable if [Third party] answers by [Date].

© 2026 The Aha Company. Confidential.

PROJECT VOCABULARY

Twelve terms to follow the rest

Each term is defined in one sentence; details come in the pages that follow.

Tokenize	Represent an asset as a token on a blockchain register.
Stablecoin	A token backed one for one by a currency, here the euro.
Smart contract	Code on the blockchain that applies the rules of the asset.
Soroban	Stellar's smart contract platform, written in Rust.
Wallet	An address that holds tokens, controlled by a private key.
Custodian	The regulated firm that keeps the keys for the issuer.

Allowlist	The investors allowed to hold the token after KYC.
Clawback	The issuer's power to take a token back, on a court order for example.
Netting	Offsetting subscriptions against redemptions to settle one net amount.
NAV	Net asset value per unit, published once a day.
Transfer agent	Keeps the official register of the fund's holders.
Mainnet	The live network, as opposed to the testnet used for trials.

© 2026 The Aha Company. Confidential.

DELIVERY

Who owns what

One line per brick: what it does, who is accountable, where it stands.

Brick	What it does	Owner	Status
Fund share contract	Issues and burns units, enforces the allowlist.	The Aha Company	Delivered
Netting contract	Offsets the day's orders into one net amount.	The Aha Company	In progress
Investor app	White-label app to subscribe and redeem.	The Aha Company	In progress
Key custody	Holds the issuer's signing keys.	[Custodian]	Third party
Register link	Sends the daily net order to the transfer agent.	[Transfer agent]	To do
KYC and onboarding	Checks investors before they join the allowlist.	[Client name]	To decide
Core banking link	Books cash movements in the bank's systems.	[Client name]	To do

© 2026 The Aha Company. Confidential.

Decisions expected today

[X] decisions to lock the path to launch: the options, who decides, what we propose.

Decision	Options on the table	Who decides	Our recommendation
Settlement asset	EURCV, EURXT, or cash through the bank	[Client] treasury	EURCV at launch, EURXT once live on [network]
Custodian	[Custodian A] or [Custodian B]	[Client] operations	Keep [Custodian A]; the platform can switch later
Share class	New class or existing class	[Client] asset management	New class, same fees
Distribution	App only, or app and partners	[Client] retail	App only until Q[X] [Year]
Launch date	Q[X] [Year] or Q[X] [Year]	Steering committee	Q[X] [Year], if [Third party] confirms by [Date]

© 2026 The Aha Company. Confidential.

Three scenarios with [Third party]

Everything between clients, the contract and [Client] is the same in all three. Only settlement changes.

A

Scenario A: All on chain

[Third party] settles units on chain, in its own settlement token.

On chain	Everything, end to end
Earliest launch	Q[X] [Year]

B

Scenario B: Stablecoin settlement

[Third party] opens a wallet and accepts a euro stablecoin for the net amount.

On chain	Units and the net amount
Earliest launch	Q[X] [Year]

● Our recommendation

C

Scenario C: [Client] bridges

The on-chain scope stops at [Client]. For [Third party], nothing changes.

On chain	Units only
Earliest launch	Q[X] [Year]

© 2026 The Aha Company. Confidential.

Scenario A: All on chain

[Third party] settles units on chain, in its own settlement token.

1

What happens

- Clients subscribe and redeem in the app, at any hour.
- Orders are netted once a day by the contract.
- [Settlement of the net amount in this scenario.]

2

What [Third party] does

- [Action 1 for the third party.]
- [Action 2 for the third party.]
- [What it must confirm, and by when.]

3

What we build

- [Contract or integration 1.]
- [Contract or integration 2.]
- [Tests and audit scope.]

NEEDS FROM [THIRD PARTY]
[One line]

EFFORT FOR [CLIENT]
[Low, medium or high]

EARLIEST LAUNCH
Q[X] [Year]

© 2026 The Aha Company. Confidential.

Scenario B: Stablecoin settlement

[Third party] opens a wallet and accepts a euro stablecoin for the net amount.

1

What happens

- Clients subscribe and redeem in the app, at any hour.
- Orders are netted once a day by the contract.
- [Settlement of the net amount in this scenario.]

2

What [Third party] does

- [Action 1 for the third party.]
- [Action 2 for the third party.]
- [What it must confirm, and by when.]

3

What we build

- [Contract or integration 1.]
- [Contract or integration 2.]
- [Tests and audit scope.]

NEEDS FROM [THIRD PARTY]
[One line]

EFFORT FOR [CLIENT]
[Low, medium or high]

EARLIEST LAUNCH
Q[X] [Year]

© 2026 The Aha Company. Confidential.

Scenario C: [Client] bridges

The on-chain scope stops at [Client]. For [Third party], nothing changes.

1

What happens

- Clients subscribe and redeem in the app, at any hour.
- Orders are netted once a day by the contract.
- [Settlement of the net amount in this scenario.]

2

What [Third party] does

- [Action 1 for the third party.]
- [Action 2 for the third party.]
- [What it must confirm, and by when.]

3

What we build

- [Contract or integration 1.]
- [Contract or integration 2.]
- [Tests and audit scope.]

NEEDS FROM [THIRD PARTY]
[One line]

EFFORT FOR [CLIENT]
[Low, medium or high]

EARLIEST LAUNCH
Q[X] [Year]

© 2026 The Aha Company. Confidential.

Risks and mitigations

1 [Custodian] delivers late

Signing keys arrive after the audit window.

MITIGATION

Tests with test keys from [Date]; switch-over in one day.

2 [Third party] answers late

No decision on settlement by [Date].

MITIGATION

Scenario C keeps the launch on track without them.

3 Regulator asks for more

New questions on the share class or on custody.

MITIGATION

Legal memo shared ahead; we attend the meeting.

4 Audit findings

Fixes take longer than the planned buffer.

MITIGATION

Audit booked for [Month]; [X] weeks of buffer.

5 Slow first subscriptions

Few investors in the first month.

MITIGATION

[Client] treasury as first investor; app campaign.

6 Key person dependency

One engineer holds critical knowledge.

MITIGATION

Two engineers on each brick; runbooks in the repository.

© 2026 The Aha Company. Confidential.

NEXT STEPS

The next 30 days

What happens between today and [Third party]'s answer.

[Day Month]	Minutes and list of decisions taken	The Aha Company
[Day Month]	First meeting with [Third party] operations	[Client name]
[Day Month]	Test keys delivered by [Custodian]	[Custodian]
[Day Month]	Share class documents filed	[Client name]
[Day Month]	Demo to the retail team	The Aha Company
[Day Month]	Go or no-go on the scenario	Steering committee

Next checkpoint: [Date], [place or call].

© 2026 The Aha Company. Confidential.

APPENDIX

A [product], step by step

The product does not change. Tokenization touches the register and settlement.

1

Issue decided

The issuer sets terms under its existing programme.

2

Token created

An asset mirrors the security, controls set at issuance.

3

Investors subscribe

Paid in euro stablecoin, delivery against payment.

4

Life cycle

Coupons and events applied by the contract.

5

Redemption

Tokens burned, stablecoin paid back on chain.

6

Reporting

Register and venue reconciled every day.

STAYS WITH THE ISSUER

- Legal form and prospectus
- Pricing and hedging
- Listing on the regulated venue

GOES ON CHAIN

- The register of holders
- Settlement in euro stablecoin
- Life-cycle events

© 2026 The Aha Company. Confidential.

APPENDIX

What [network] gives a [product]

Four reasons.

01

Already there

The settlement asset is live on the network today. No new dependency to add.

02

Native controls

Authorization, clawback and freeze on native assets; custom logic in contracts.

03

Low cost

Fees under [X] cent per operation, finality in [X] seconds.

04

Institutions

[Institutions] already issue and settle on the same network.

© 2026 The Aha Company. Confidential.

APPENDIX A

EURCV on Stellar: the design

We designed, built and integrated the Stellar deployment, with compliance controls defined together with [Client name] compliance.

Network	Stellar
Design and build	Q[X] to Q[X] [Year]
Audit	[Auditor], [Month Year]
Status	Live on mainnet

Live, audited, and still evolving with us.

The asset	A classic Stellar asset, so wallets and exchanges support it with no custom code.
The admin contract	A custom Soroban contract governs issuance, allowlisting, freeze and clawback.
Controls	Pause, allowlist and limits defined with the issuer's compliance team.
Integration	Connected to the issuer's custody and treasury systems, with monitoring.

© 2026 The Aha Company. Confidential.

APPENDIX B

Networks we ship on

The same team and the same standards, on the networks institutions are building on.

Network	What it offers	Our work	Status
Stellar	Soroban contracts in Rust, native assets with authorization, clawback and freeze. Our home network since [Year].	EURCV, fund tokenization	Delivered
Cardano	A UTxO ledger with native multi-assets, Aiken and Plutus contracts, and CIP-0113 programmable tokens.	Stablecoin blueprint	Delivered
XRPL	Native issued assets with issuer-side controls (authorization, freeze, clawback) and a native exchange.	Issued asset controls	In progress
EVM networks	Permissioned tokens with compliance hooks, where the institution's counterparties already are.	Permissioned tokens	In progress
[Network]	[What the network offers institutions, in one sentence.]	[Engagement]	To do

© 2026 The Aha Company. Confidential.

02

SECTION 02

How it works

Architecture, daily cycle, and a subscription from start to finish.

© 2026 The Aha Company. Confidential.

AGENDA

What we will cover

[Client name] workshop, [Date], [place].

01	**Where the project stands** What is delivered, what is left	[XX] min
02	**How it works** Architecture and daily cycle	[XX] min
03	**Live demo** A subscription on testnet	[XX] min
04	**Scenarios** Three options with [Third party]	[XX] min
05	**Decisions** What we need to settle today	[XX] min
06	**Next steps** The next 30 days	[XX] min

[Total duration]

© 2026 The Aha Company. Confidential.

WHAT WE WANT FROM THIS WORKSHOP

[Two hours], three outcomes

1	**Align**	The same picture in every head: what is delivered, what is missing, who does what.
2	**Decide**	[X] decisions that lock the path to launch.
3	**Commit**	Owners and dates for the next 30 days.

© 2026 The Aha Company. Confidential.
